

# Extra Credit: Basic Syntax, Conditional Statements and Loops

## 1. Sort Numbers

Receive three numbers and sort them in descending order. Print each number on a new line.

### Examples

Input	Output
2 1 3	3 2 1
-2 1 3	3 1 -2
0 0 2	2 0 0

## 2. English Name of the Last Digit

Write a **function** that returns the **English name** of the last digit of a given number. Write a program that receives a number and prints the returned value from this function.

### Examples

Input	Output
512	two
1	one
1643	three

## 3. Next Day

Write a JS function that calculates the date of the next day by given year, month and day.

The **input** comes as three number parameters. The first element is the year, the second is the month and the third is the day.

The **output** should be returned as a result of your function.

## Examples

Input	Output
2016, 9, 30	2016-10-1

## Hints

- Use **Date()**

## 4. Reverse String

Write a program which reverses a string and print it on the console.

## Examples

Input	Output
Hello	olleH
Kingsland	dnalsgniG
12345	54321

## 5. Distance Between Points

Write a JS function that calculates the distance between two points by given x and y coordinates.

The **input** comes as four number elements in the format **x1, y1, x2, y2**. Each pair of elements are the coordinates of a point in 2D space.

The **output** should be returned as a result of your function.

## Examples

Input	Output
2, 4, 5, 0	5

Input	Output
2.34, 15.66, -13.55, -2.9985	24.50778901186315
